SUMMARY

Full-stack developer with 4 years building production web apps in Next.js, React, TypeScript and Node.js. I built a four-portal mobility platform alone, with role-based access enforced at four layers and six production cron jobs, and I ship CMS-driven sites that non-technical teams run themselves. I also run paid media, so I build with conversion tracking and page speed in mind from day one.

EXPERIENCE

Full-Stack Developer - RideOn Nigeria

Remote · Aug 2025 to May 2026 · rideonnigeria.com

- Built the whole platform alone: four portals (customer booking, driver, partner fleet, admin) on one Next.js + TypeScript codebase, replacing the WhatsApp and spreadsheet operations with one platform the owner ran remotely from Canada.
- Enforced role-based access at four layers: Edge middleware session checks, route guards, component conditionals and Firestore security rules (per-portal collections, owner-scoped reads, admin-only writes).
- Shipped six production cron jobs, including driver auto-assignment every 5 minutes using Firestore transactions for race-safe matching and a wave-based offer fan-out (10, then 25, then 60 drivers), plus an email retry queue with exponential backoff (5 min, 30 min, 2 hr).
- Integrated Dojah KYC and built Zod-validated multi-step booking forms, where one schema scales from a 3-field booking to a 21-field placement application.
- Scores 100 on Google Lighthouse accessibility, best practices and SEO (measured September 2026).

Web Developer - VIP Creative Studio

Remote (US) · Aug 2025 to May 2026 · vipcreative.studio

- Built the agency's 13-page site on Next.js + Sanity CMS, with 19 schema files and 100+ validated fields, so the non-technical team updates copy, images and CTAs without touching code.
- Scores 97 on Lighthouse desktop performance and 100 on best practices (measured September 2026).
- One contact-form API route runs the confirmation email, admin alert and Mailchimp sync with error isolation, so a Mailchimp failure never breaks a submission.
- Also ran the agency's paid media (\$16,000+ a month on Meta and Google for two US credit unions), which is why my builds ship with GA4, GTM and consent-mode tracking from day one.

Web Developer & Digital Marketer - Baye Business Solutions

Remote · Apr 2025 to Oct 2025 · bayebusinesssolutions.com

- Rebuilt a broken PHP site as Next.js + TypeScript + MongoDB: 8+ service pages, a solutions hub, a blog and an admin dashboard with full CRUD and role-based permissions (admin, editor, user).
- Cached the Mongoose connection for serverless cold starts, served pages through incremental static regeneration (30-minute revalidation) and added full-text search.
- Set up GA4 and Microsoft Clarity from zero, plus typed JSON-LD schema, a dynamic sitemap and llms.txt.

Freelance Full-Stack Developer

Remote · May 2022 to Present · growveloper.com

- Built growveloper.com on Next.js 16, React 19, TypeScript strict and Sanity (30 schemas, 200+ CMS fields), with sub-second time to first byte and a GSAP animation system shared across 100+ components.
- Built a paid audit checkout with Flutterwave webhook signature verification and idempotent handling, alongside Stripe and Lemon Squeezy, across USD, CAD and NGN.

PROJECTS

- **career-ops, AI multi-agent system** (Node.js, Claude): an orchestrator plus five specialist agents, each with its own memory, tool permissions and pre-action safety hooks, running a live job-search pipeline. Includes a 30-case evaluation suite for its screening agent, and locked, atomic data writes.
- **Dara, Nigerian Languages API** (Node.js, Express, PostgreSQL): a REST API serving dialect-aware data across Hausa, Igbo and Yoruba, with OpenAPI docs, pagination middleware and a raw-to-clean ingestion pipeline.

SKILLS

Frontend: Next.js (App Router, Server Components), React, TypeScript, Tailwind CSS, GSAP, Framer Motion, shadcn/ui

Backend and data: Node.js, Express, REST APIs, PostgreSQL, MongoDB, Firebase (Auth, Firestore), Sanity, MySQL, PHP

Platform: Vercel (edge, cron), Stripe, Flutterwave, Sentry, Zod, Git

Tracking and SEO: GA4, Google Tag Manager, JSON-LD schema, Core Web Vitals

EDUCATION

B.Sc. Computer Science, Fountain University, Nigeria · 2026
